
PowerwoRx e3

Tuesday, 15 July 2008

PowerwoRx e3 is an innovative Green Electricity Device for your home that provides up to 25% energy savings on your electric bill and protection for your home electronics from power surges based upon unique, patented technology. Lower your Electric Bills with PowerwoRx e3

It is a small device that is installed in your circuit breaker box and it makes the electric devices and appliances in your home run more efficiently. As a result your house needs less power from the electric company. How can the PowerwoRx e3 Green Electricity Device help you?

Energy Savings and Lower Electric Bills Better Energy Efficiency for Appliances & Electronics Equipment Protection from Power Surges Energy Savings - Lower Electric Bills by up to 22% PowerwoRx e3 provides Energy Savings by reducing the amount of power drawn from the electric company.

Home owners have more electronic devices and appliances running in their house than ever before. Air Conditioning units, refrigerators, freezers, washers, dryers, dishwashers, pool pumps, computers, entertainment systems, vacuum cleaners, furnace blower motors, fans etc.

The technology applied by the PowerwoRx e3 makes all of your appliances run more efficiently, thus causing decreased demand from your electric company, thereby using less electricity. The process is called power factor optimization. Power factor is the percentage of electricity that is delivered to your house and used effectively, compared to what is wasted. For example, a 1.0 power factor means that all the electricity that is being delivered to your home is being used effectively for its purpose. However, most homes in America today have a .75 power factor or less.

This means that 75% of the electricity that is coming thru your meter at your home or business is being used effectively, the other 25% is being wasted by your appliances and electric devices. With a low power factor, the utility has to deliver more electricity to do the same work. However, the PowerwoRx e3 unit increases that power factor in most cases to .97 or .98, thus increasing the effective use of your electricity and lowering your electric bill substantially.

Better Energy Efficiency - Electrical Noise Filtration PowerwoRx e3 enables home owners to use electric devices more efficiently. Our homes, businesses, and factories are filled with electrical devices that generate noise. What is ironic is this noise is harmful to the very appliances and electronics that create the noise.

The offending noisemakers are common items like TVs, Computers, Compact Fluorescent Bulbs, Fluorescent Lamps, Stereos, and even major appliances that now have electronic interface and control. The electrical noise created by these devices breaks down the power supply in your home, causing harm to your electronics and appliances over time and making them run less efficiently. PowerwoRx is designed to filter noise from the electric system in your home, thereby allowing your appliances and electronics to need less power.

Let's face it; the use of electronics within the American home has been growing at exponential rates and the need for filtering out the noise created by the large number of electronics and appliances has never been greater. Equipment Protection PowerwoRx e3 provides Spike/Surge Suppression, a feature that will help protect your appliances and electronics (TV, Stereos, Computers, DVRs, Security Systems, Wireless Phones, Florescent Lamps and other equipment) from voltage spikes. Voltage spikes can come from many different sources such as noise equipment (like motors), power fluctuations, static electricity, and lighting.

While many home owners use surge protectors for some equipment it is inefficient to use separate surge protectors for every appliance or electric device there is a huge benefit to centralized surge protection for your entire house.

The PowerwoRx e3 comes with a Ten Year Limited Product Warranty and a 25,000 Home Appliance and Electronics Protection Warranty. If you are interested or need additional information on this product please: email us or contact us by phone.

(Furnished and Installed for \$684.00)
